Capital Improvement Program

The City of Rockford's Fiscal Year 2015-2019 Capital Improvement Program represents a comprehensive, City-wide infrastructure investment program that fulfills our core values of enhancing public safety, maintaining and improving the movement of commerce and economic activity throughout the City, and promoting a sense of well-being for the community as a whole. The Program is intended to serve as a living document that allows for the ability to address unforeseen circumstances and the flexibility to react to changing situations. Some areas of emphasis that are evident in this Program are improvements to the City's arterial and collector street network, the rehabilitation of dilapidated bridges and structures that are hampering commerce with weight restrictions, the programming of regular maintenance activities to sustain the life of our infrastructure, applying significant funds to improving and expanding our existing stormwater infrastructure, and enhancing the City's pedestrian accommodations. This book presents the proposed Program in its entirety, including a chapter dedicated to the Water Improvement Program. The immediate following pages highlight the funding sources and expected revenues for the Capital Improvement Program. On page seven the current fund balances are highlighted and shown as the carryover funds to 2015. These carryover funds, plus the projected revenues in 2015, are used to create the total 2015 Program fund. This formula is followed for FY 2016 and FY 2017 Program fund development.

The major projects have been specifically identified and itemized for the FY 2015-2017 Program. The FY 2018-2019 Program is shown as more theoretical in nature with less specific projects identified. This allows for greater flexibility and adaptability to changing needs and conditions of our infrastructure, and for more accurate revenue forecasting as the Program advances. On page nine, major infrastructure projects are highlighted with detailed breakdown sheets that describe the funding sources, project scope, and anticipated schedules. On page 19 the Program investments for FY 2015-2019 are then presented by category: Neighborhood Program, Capital Roadway Improvement Program, Highway Structure Repair and Replacement Program, City-Wide Drainage and Stormwater, Programmed Maintenance, Sidewalk and Multi-use Path Program, Capital Lighting and Traffic Signals, Project Development, and Special Projects. For the life of this Capital Improvement Program, the actual construction costs of the arterial and collector street projects will be tracked independently. Should there be any savings from the budgeted estimates, this amount will be reported to the City Council. A minimum of \$300,000 of these annual savings, should they exist, will then be allocated in equal amounts to the three Wards with the worst Pavement Condition Index (PCI) ratings. These additional Ward allocations shall be applied towards neighborhood street improvement projects in the corresponding calendar year.

CITY-WIDE STATISTICS

229 Miles of Arterial and Collector Streets

31,368 Street Signs

538 Miles of Local Road and Streets

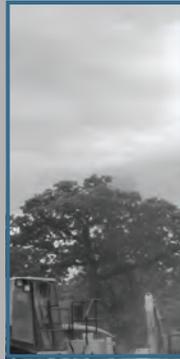

87 Miles of Bike Paths

130 Bridges and Box Culverts

793 Miles of Sidewalks

Major Projects

Each year, the City of Rockford has multiple large projects that span several years to bring from project conception to substantial completion. Below are nine such projects contained in the Capital Improvement Program that will be highlighted in detail in the following pages.

N. Alpine Rd. Box
Culvert Replacement

S. Alpine Rd. Box
Culvert Replacement

Harrison Ave. Corridor
Reconstruction

N. Main St. Corridor
Reconstruction

S. Main St. Two-Way
Conversion

W. State St. Corridor
Reconstruction - Ph. 2

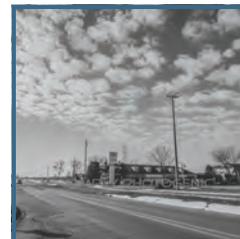

Downtown Sports
Complex (Ingersoll)

Downtown Rockford
Amtrak Station

Bell School Rd.
Improvements

Clicking on the title of the individual major projects will take you to the summary sheet.

Project Information

Current Status: Preliminary Design

Tentative Construction Letting Date:

April 2016

Tentative Project Completion Date:

November 2016

Estimated Project Cost: \$2,020,000

Programmed in FY 2015-2019

Design Eng.: \$210,000

Construction Eng.: \$210,000

*Construction: \$1,600,000**

**City's share of construction is 20% of the total estimated costs. The remaining 80% is funded through IDOT Bridge Program Funds.*

North Alpine Road Box Culvert Replacement

The North Alpine Road Box Culvert spans the North Branch of Keith Creek just south of Eastridge Drive. The three-cell culvert structure was originally constructed in 1930. The 2013 inspection of this culvert revealed advanced deterioration of the top slab and side walls. As a result, a load posting was placed on the structure. At the culvert, Alpine Road has an average daily traffic of over 26,000 vehicles, similar to the South Alpine Road culvert, complete replacement of the structure is needed in order to reopen this vital commercial corridor to truck and emergency vehicle traffic. This project involves the complete reconstruction of the culvert to modern standards with resurfaced roadway approaches and sidewalk installed on the east and west sides of the structure.

South Alpine Road Box Culvert Replacement

The South Alpine Road Box Culvert spans the South Branch of Keith Creek near the entrance to Alpine Park. The two-cell structure was originally constructed in 1930. The 2013 inspection of this culvert revealed advanced deterioration of the top slab. As a result, a load posting was placed on the structure. At the culvert, Alpine Road has an average daily traffic of over 27,000 vehicles and, as the City's major north-south arterial route, complete replacement of the structure is needed in order to reopen this vital commercial corridor to truck and emergency vehicle traffic. This project involves the complete reconstruction of the culvert to modern standards with resurfaced roadway approaches and sidewalk installed on the east side of the structure.

Project Information

Current Status: Design

Tentative Construction Letting Date:

April 2015

Tentative Project Completion Date:

November 2015

Estimated Project Cost: \$1,835,000

Programmed in FY 2015-2019

Design Eng.: \$110,000

Construction Eng.: \$225,000

*Construction: \$1,500,000**

**City's share of construction is 20% of the total estimated costs. The remaining 80% is funded through IDOT Bridge Program Funds.*

Project Information

Current Status: Design

*Tentative Construction Letting Date:
June 2015*

*Tentative Project Completion Date:
Fall 2016*

Estimated Project Cost: \$6,000,000

Programmed in FY 2015-2019

*City Share: \$458,600**

**City's share of the project is for construction and engineering costs for City-requested items. These include decorative street lighting and traffic signals, pedestrian improvements, and reconstruction of portions of Walton Street.*

Bell School Road Improvements

The Winnebago County Highway Department is the lead agency on the reconstruction of Bell School Road from Lucky Lane to Argus Drive. The project consists of full reconstruction and widening of Bell School Road to a four-lane section, improvements to the intersection at East State Street including additional turn lanes, intersection improvements and installation of traffic signals at Walton Street and Argus Drive, and related construction. Upon project completion, this portion of Bell School Road will be jurisdictionally transferred to the City under a 2005 Intergovernmental Agreement. The City worked with the County to incorporate certain items in the project, including decorative corridor street lighting and traffic signals, pedestrian accommodations, and the reconstruction of Walton Street to the bus depot entrance road.

Harrison Avenue Corridor Reconstruction—9th St. to 20th St.

Harrison Avenue is a vital transportation corridor that provides connectivity between City Arterial Streets, County Highways, State Highways, and Interstate Highways through the heart of Southeast Rockford’s industrial core. The section of Harrison Avenue between 9th Street and 20th Street will be reconstructed into a modern Strategic Regional Arterial that will improve access for businesses, pedestrians, and residents. Plans include a full four-lane concrete pavement section with medians, reconstruction of the box culvert over the Southeast Drainage Ditch, major intersection improvements at 11th Street and 20th Street, installation of a shared-use path and sidewalks, upgraded water infrastructure, and corridor street lighting. Additionally, the portion from 20th Street to 22nd Street will receive an asphalt pavement overlay. Construction is tentatively scheduled to commence in the third quarter of 2015.

Project Information

Current Status: Design

*Tentative Construction Letting Date:
June 2015*

Project Completion Date: Early 2017

Estimated Project Cost: \$22,000,000

Programmed in FY 2015-2019

*Land Acquisition: \$2,100,000**

*Construction Eng.: \$1,950,000**

*Construction: \$12,550,000**

**City’s share of land acquisition, construction engineering, and construction is 20% of the total estimated costs. The remaining 80% is funded through Federal Surface Transportation Urban funds administered through IDOT.*

Project Information

Current Status: Design

Tentative Construction Letting Date:

April / June 2015

Tentative Project Completion Date:

Late 2017

Estimated Project Cost: \$28,964,000

Programmed in FY 2015-2019

*Construction: \$2,300,000**

**City's share is for cost of pre-construction property demolitions as well as street lighting, pedestrian improvements, and landscaping elements that the City requested be incorporated into IDOT's project.*

North Main Street Corridor Reconstruction

North Main Street is a significant transportation corridor through Rockford that provides access to numerous neighborhoods, employment centers, and recreational facilities. Due to its vital role in the area's overall transportation system, the project was included in the State of Illinois' *Illinois Jobs Now!* Capital Construction Plan that was enacted in 2009. The project will result in the corridor being fully reconstructed as a modern State Highway with a four-lane concrete pavement cross section, concrete medians, major intersection improvements, upgraded turn lanes, and new drainage facilities from Yonge Street to Benington Road. The City requested that corridor street lighting, ornamental traffic signals, a shared-use path, sidewalks, upgraded water infrastructure, and landscaping elements (including some grass medians and decorative stamped concrete) be incorporated into the project. The City will be taking the lead on pre-construction property demolition projects.

South Main Street Two-Way Conversion

As a condition for the redevelopment of the Amerock Building into a hotel/convention center, the City has committed to vacate the Wyman Street Crossover between Main Street and Chestnut Street. Vacation of the Crossover will allow for additional land to redevelop parking and circulation roads for the hotel. This project will involve the conversion of Main Street between Cedar Street and Chestnut Street, which is currently a southbound one-way street, to two-way traffic. The project scope will include a complete reconstruction of the pavement, major intersection improvements, and streetscape elements (including street lighting, sidewalks, and landscaping). This rerouting is considered temporary, and will be the first project undertaken with the long-term goal of eliminating the Route 2 one-way pairs in downtown. Eventually, it is intended that all of Route 2 will be relocated to Church Street.

Project Information

Current Status: Design

Tentative Construction Letting Date:

Summer 2015

Tentative Project Completion Date:

Early 2016

Estimated Project Cost: \$1,560,000

Programmed in FY 2015-2019

Engineering: \$260,000

Construction: \$1,300,000

Project Information

Current Status: Land Acquisition

**Tentative Construction Letting Date:*

Early 2017

Tentative Project Completion Date:

Early 2018

Estimated Project Cost: \$10,300,000

Programmed in FY 2015–2019

*Land Acquisition: \$400,000**

*Construction: \$700,000**

**City's local match for land acquisition and City-requested items to be included in IDOT's project (street lighting, traffic signals, and pedestrian improvements).*

West State Street Reconstruction—Phase Two

Phase 2 of the overall West State Street corridor improvement will include the full reconstruction of West State Street between Independence Avenue (commencing where the Phase 1 project ended) and Day Avenue. Land acquisition activities have recently started and IDOT has begun preparation for design engineering. The project will consist of a complete reconstruction of the roadway to a modern State Highway with a four-lane pavement section, intersection improvements, medians, and drainage facilities. Also included in the project will be City-requested items such as street lighting, ornamental traffic signals, upgraded water infrastructure, and pedestrian improvements. Once completed, U.S. Business Route 20 will have a full four-lanes of through traffic along its entire mileage in Rockford.

Downtown Sports Complex (Ingersoll)

The Downtown Sports Complex (DSC) project will result in the conversion of the former Ingersoll facility on the east bank of the Rock River into a modern indoor sports complex. Once completed, the building will contain eight basketball courts or 16 volleyball courts, a restaurant with views of the river, and meeting space. As a pillar of the Reclaiming First initiative, the construction is being financed by a consortium of funding sources including the Rockford Park District, a Winnebago County hotel tax, various grants including River's Edge, the U.S. EPA, and the Redevelopment Fund. The project will include a concrete path along the river bank and two parking lots which will add over 450 new stalls to the downtown parking inventory. The facility will be operated by the Rockford Park District.

**Project is financed with a myriad of funding sources this only represents the funds allocated directly from the C.I.P.*

Downtown Rockford Amtrak Station

By the end of 2015, daily Amtrak passenger train service between Rockford and Chicago will exist for the first time since 1981. The service will utilize the existing Union Pacific Railroad tracks, which will receive track, signal, and safety improvements, to allow for train speeds up to 79 mph by the end of 2016. The Rockford Mass Transit District and the City are responsible for developing plans and constructing a train station in the downtown area to serve the passengers. Stakeholder meetings are ongoing to receive community feedback prior to the detailed station design commencing. The station will be located near the intersection of South Main Street and Cedar Street; by October 2015 a temporary platform will be in place as construction commences on the permanent station. Once completed, the station will contain access to new parking facilities and the future hotel development at the Amerock Building.

2015 Program

Overview

Neighborhood Program

The Neighborhood Program provides funds for construction on the City's nearly 550 miles of residential streets and 1,100 alleys. Funds are provided to Aldermen to use on a discretionary basis for improvements throughout their respective Wards. A detailed breakdown of each Ward allocation can be found in the table on the following page.

Wills Ave. Between Cannon St. and Kinsey St.

Ward Allocation

Ward Number	Basic Funding	Alley Allocation	Total Allocation
1st Ward	371,428	-	371,428
2nd Ward	371,428	73,501	444,929
3rd Ward	371,428	53,001	424,429
4th Ward	371,428	-	371,428
5th Ward	371,428	45,001	416,429
6th Ward	371,428	27,501	398,929
7th Ward	371,428	55,501	426,929
8th Ward	371,428	24,001	395,429
9th Ward	371,428	23,001	394,429
10th Ward	371,428	16,001	387,429
11th Ward	371,428	73,500	444,928
12th Ward	371,428	49,500	420,928
13th Ward	371,428	59,500	430,928
14th Ward	371,428	-	371,428
TOTAL	5,199,992	500,008	5,700,000

Capital Roadway Improvement Program

The Capital Roadway Improvement Program provides funds for construction projects on the City's network of arterial, collector, commercial, and industrial streets. The Program additionally provides matching funds for State Highway and corridor projects. Roadways slated for improvement are identified and programmed based on criteria such as: amount of traffic, maintenance of truck routes, importance of the route to the movement of commerce and economic activity, and the overall significance to the regional transportation system.

Highway Structure Repair and Replacement

The Highway Structure Repair and Replacement Program provides funds for the repair and replacement of bridges and culverts throughout the City, typically through leveraging our dollars as a local match for IDOT bridge funds. The Program additionally provides funds for biennial engineering inspection services as well as long-term maintenance on our structures. Structures to be repaired and/or replaced are selected based on the biennial inspections, with special consideration given to those structures that are currently encumbered with weight restrictions.

City-Wide Drainage and Stormwater

Stormwater runoff from streets, lawns, parking lots, construction sites, industrial facilities and other impervious surfaces occurs as a result of precipitation events (for example, rain water or melted snow). The stormwater runoff may enter surface waters directly or through natural and constructed channel systems. Activities occurring in developed and urban areas contaminate stormwater runoff with pollutants such as automobile oil, grease, metals, sediment, bacteria from animal waste, nutrients and pesticides, as well as deposits from airborne pollutants. Unmanaged stormwater can cause erosion and flooding and it can carry excess nutrients, sediment and other contaminants into rivers and streams. Properly managed stormwater can recharge groundwater and protect land and streams from erosion, flooding and pollutants. Funds for this program will be used for the construction, operation and maintenance of the stormwater management systems to control, reduce and improve water quality and water quantity and to meet state and federal requirements.

Sidewalk and Multi-Use Path Program

The Sidewalk and Multi-Use Path Program provides funds for pedestrian projects in the City. The goals of the program are to increase the safety and mobility of City pedestrians by repairing damaged or deteriorated sidewalks (with a specific focus on trip hazards), installing or upgrading curb ramps at pedestrian crossings in accordance with the Americans with Disabilities Act, installing new sidewalks to provide connections where gaps exist, and expanding our multi-use path and trail system.

Capital Lighting and Traffic Signals

The Capital Lighting and Traffic Signals Program provides funds for traffic signal and street lighting upgrade projects. Funds are provided through this program for traffic signal removal projects; in these instances studies are performed and due to changing traffic patterns in the City certain traffic signals can be removed which reduces the City's long-term maintenance costs. This program is also utilized for matching funds for Highway Safety Improvement Program (HSIP) grants, which is a Federal grant program that provides 90% of eligible construction costs for traffic safety improvement projects.

Water Improvement Program

The City of Rockford – Water Division maintains approximately 850 miles of water main, 26 wells, five major reservoirs, two elevated tanks, and ten zone control valves. Capital improvements to all of these water system components are paid from the Water Replacement and Improvement Account (WRIA). Approximately 50% of the Water Division’s CIP budget is spent on water main replacement.

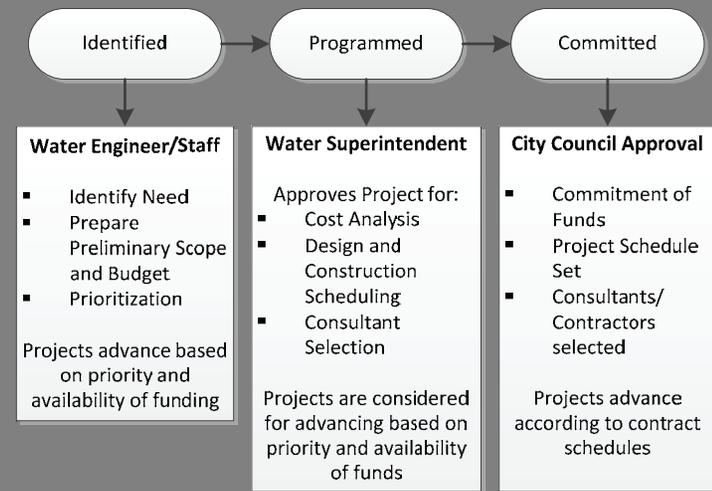

Approximately 20% of the City’s water mains (approximately 170 miles) are older than 70 years, which is the average life expectancy of water mains (see graph below). These water mains are at an elevated risk of failure resulting in costly damage.

Replacing all the water mains older than 70 years would cost approximately \$200 million. A risk analysis has been performed to prioritize water main replacement projects based on water main age, break history, and maintenance needs. Based on this analysis, replacing the highest risk water main would cost approximately \$21 million.

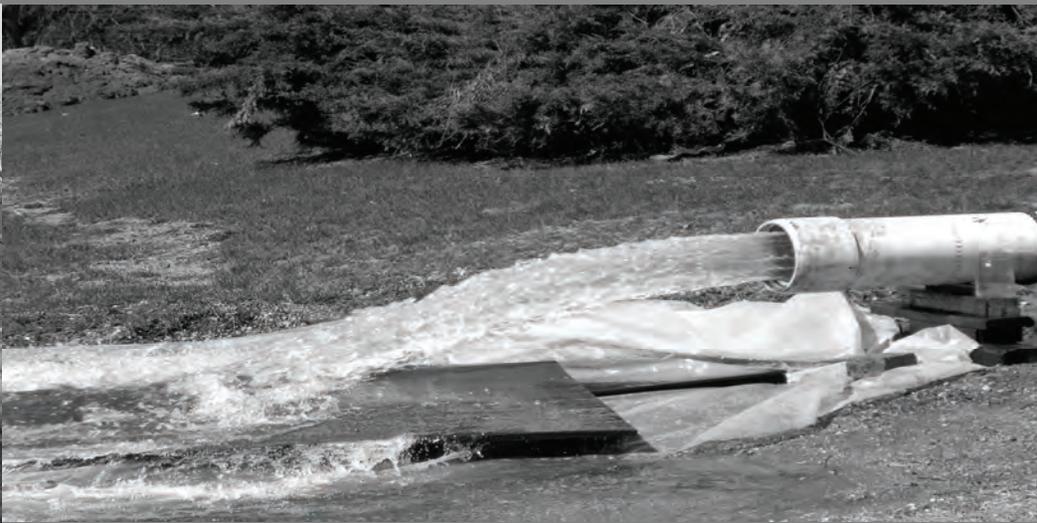

Because the capital improvement needs are so much greater than the available funding, a prioritization process has been developed. The process begins with the identification of a project based on the risk analysis. Once identified the highest priority projects are

considered for further analysis and funding. If the funding is available, the project becomes programmed for a specific year. Then, according to the program schedule, it is taken before City Council where if approved it becomes committed. This process is illustrated below.

A project may also be driven to become programmed or committed based on roadway projects that are committed by other Divisions or State entities. Not replacing water mains when these opportunities arise would be detrimental to the overall benefits of the project to the City.

The cost of committed and programmed projects for 2015 – 2017 are about twice the WRIA budget. This will require the Water Division to use a large portion of its reserves. Replenishing these reserves will require a water rate increase or cessation of water capital improvements.

Water Main Replacement

Harrison Avenue Water Main Improvements– 20th Street to 9th Street

In conjunction with the roadway reconstruction project, the Water Division, under the same contract, will be replacing and upsizing the water main (including hydrants and services to the property lines) from 9th Street to just past 20th Street where it will tie into Zone Control Valve (ZCV) No. 7. The replacement and upsizing was based on the analysis performed by MWH in April of 2010. By taking the opportunity to improve our water main at this time, the City will be providing a strong transmission main that connects the central pressure zone to the east zone and the west zone through the zone control valves (ZCV No. 7)

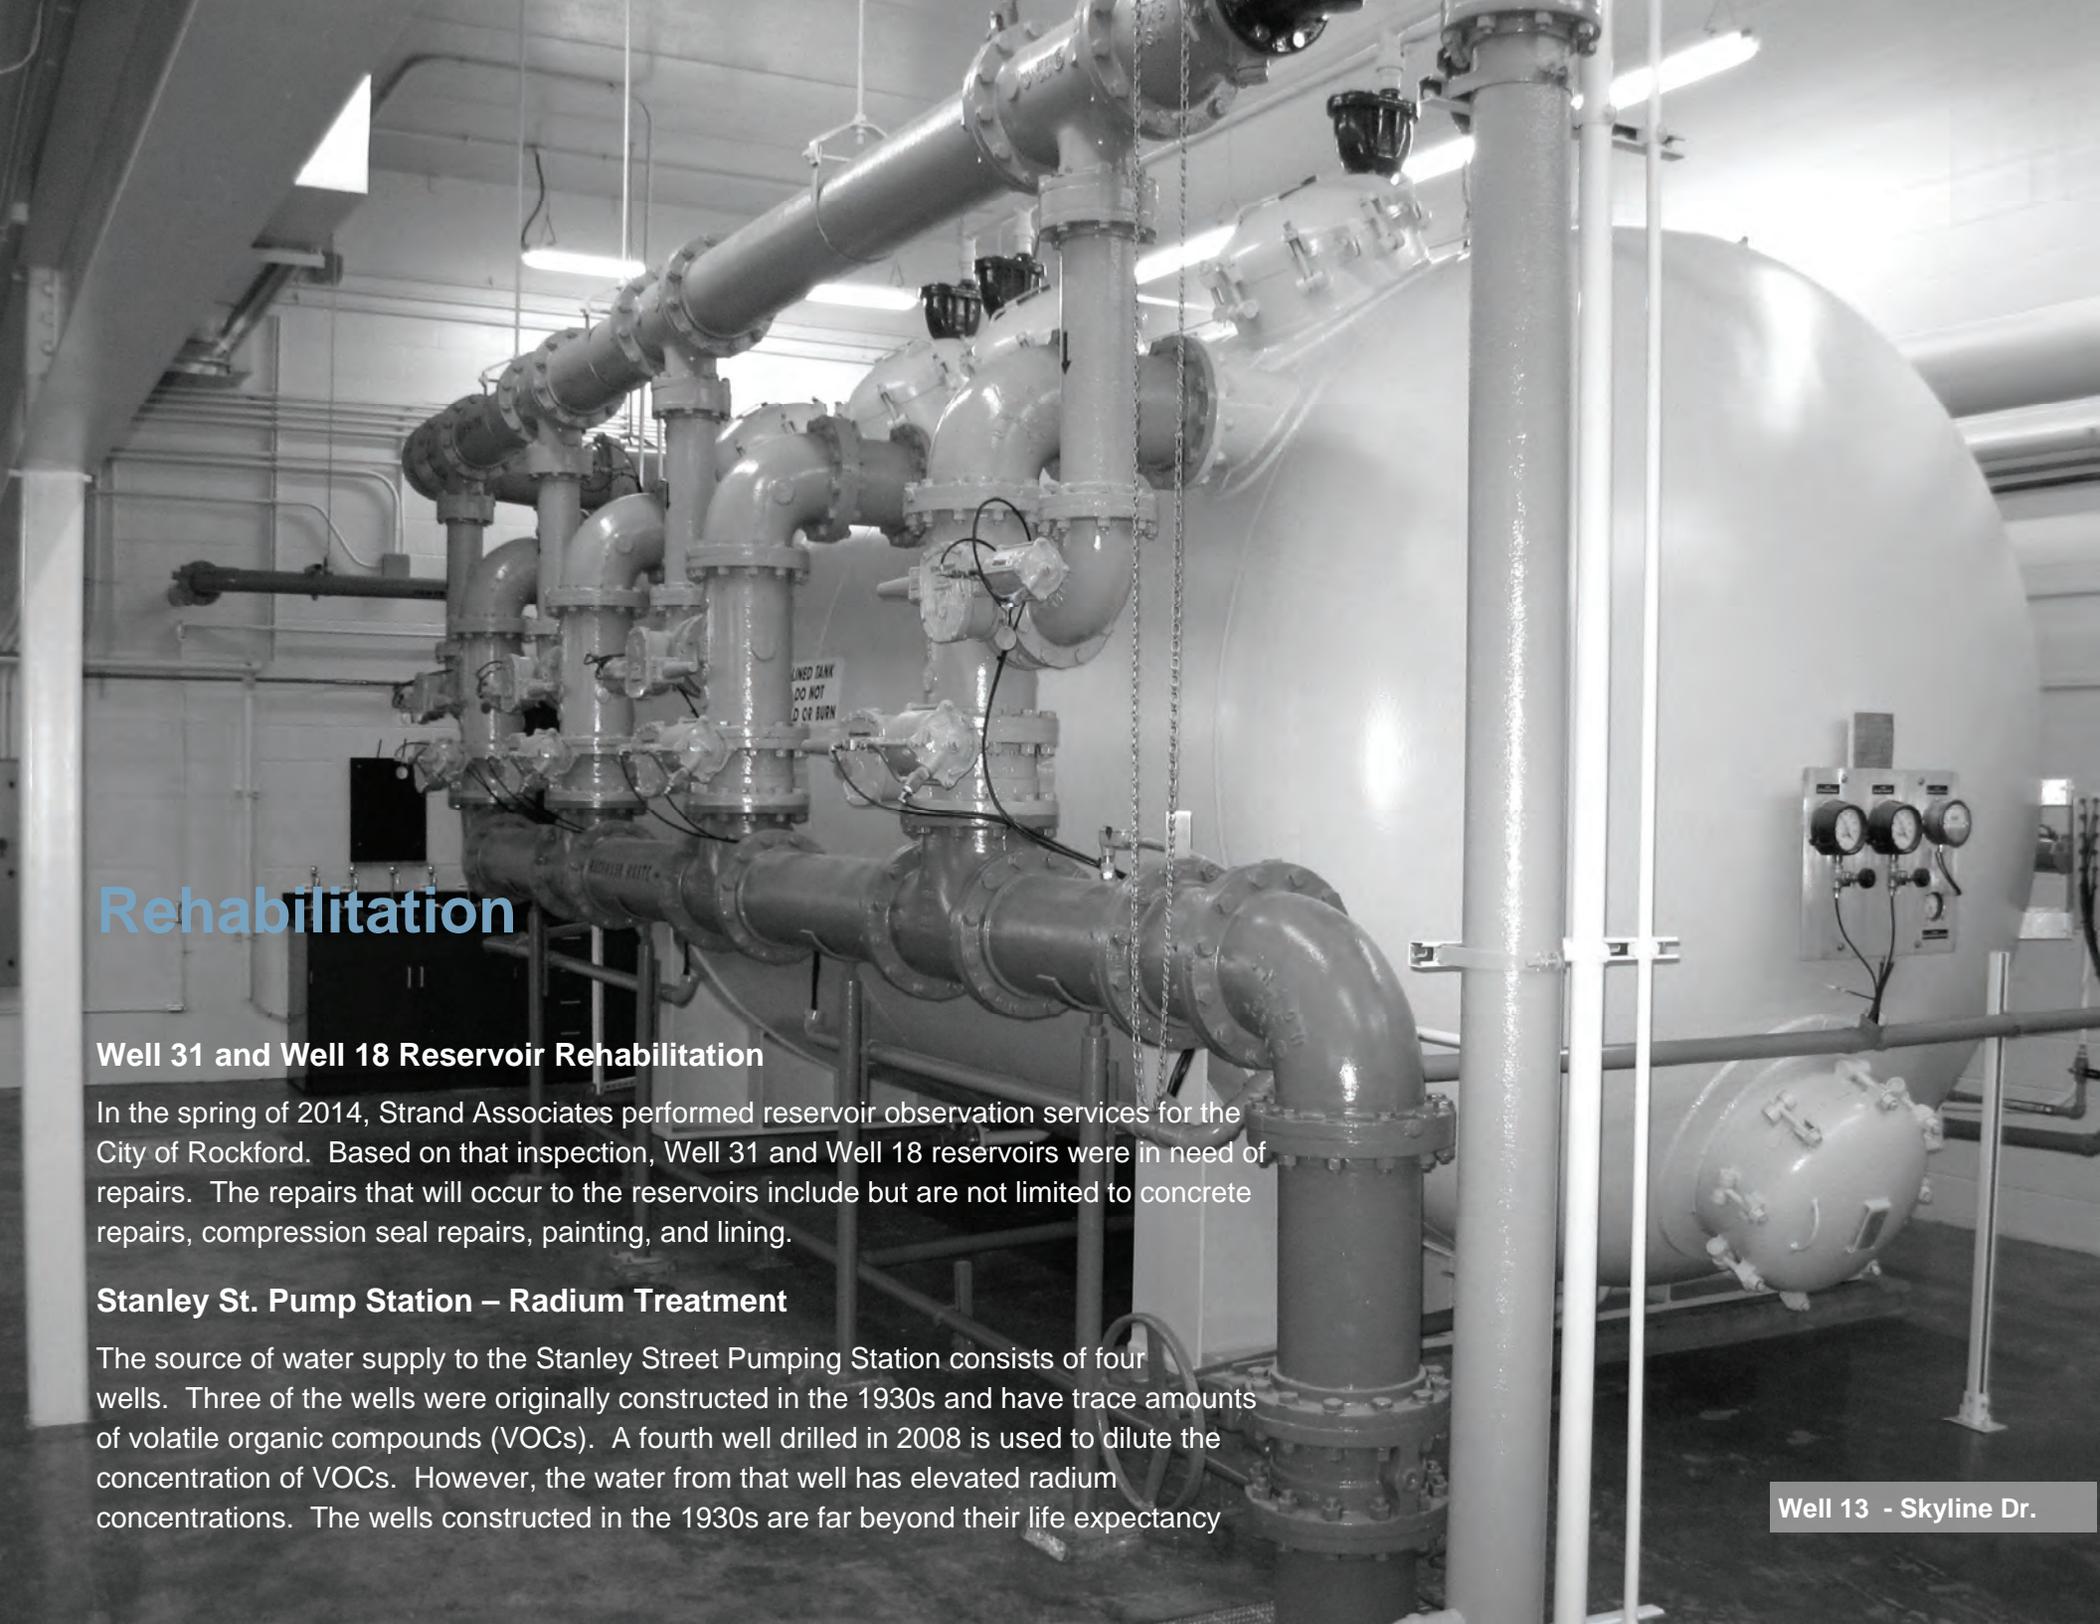

South Main Street Water Main Improvements - Clifton Ave. to Cedar Street

As part of the Illinois Department of Transportation's South Main Street reconstruction plans, the Water Division, under the same contract, is currently replacing and upsizing the water main (including hydrants and services to the property lines) from approximately Ogilby Ave. to Cedar Street. The existing water main ranges in size from 6" to 8" and age from 1905 to 1944. The replacement and upsizing was based on the system analysis performed by MWH in April of 2010.

North Main Water Main Improvements – Auburn Street to Riverside Boulevard

In conjunction with the Illinois Department of Transportation's North Main Street reconstruction plans, the Water Division, under the same contract, is currently replacing and upsizing the water main (including hydrants and services to the property lines) from approximately Yonge Street to Willoughby Ave. The existing water main is 8" in size and ranges in age from 1910 to 1940. The replacement and upsizing was based on the system analysis performed by MWH in April of 2010.

Rehabilitation

Well 31 and Well 18 Reservoir Rehabilitation

In the spring of 2014, Strand Associates performed reservoir observation services for the City of Rockford. Based on that inspection, Well 31 and Well 18 reservoirs were in need of repairs. The repairs that will occur to the reservoirs include but are not limited to concrete repairs, compression seal repairs, painting, and lining.

Stanley St. Pump Station – Radium Treatment

The source of water supply to the Stanley Street Pumping Station consists of four wells. Three of the wells were originally constructed in the 1930s and have trace amounts of volatile organic compounds (VOCs). A fourth well drilled in 2008 is used to dilute the concentration of VOCs. However, the water from that well has elevated radium concentrations. The wells constructed in the 1930s are far beyond their life expectancy
