

## Amended Remedial Action Plan: Status

The Amended Remedial Action Plan will soon be prepared by Fehr-Graham and Associates. The original approved Remedial Action Plan (2010) as well as the Amended Remedial Objectives Report (Summary attached) have been reviewed extensively by the Illinois EPA Site Remediation Program. Based on this review, staff is reasonably certain that the Cleanup Actions referenced in the Draft Analysis of Brownfield Cleanup Alternatives will include all of the required Cleanup Actions. The most important and most extensive of the Cleanup Actions is the Engineered Barrier. This Engineered Barrier is also the main component of the approved Remedial Action Plan approved by IEPA during 2010.
